19. ABSTRACT (Continue on reverse if necessary and identify by block number) This report presents the estimation of case total limits for catastrophic re-insurance payments to be made to thirty-four Army TRICARE catchment areas for Fiscal Year (FY) 1996. Case totals include both institutional and professional services CHAMPUS payments. FY 1995 data were used to derive the final estimates. The final catastrophic case cutoffs are listed in Table 1 as part of the report Summary. These cutoffs, when implemented by Army Medical Command (HQ MEDCOM), will result in approximately 5% of each catchment area's total annual CHAMPUS budget being paid through catastrophic re-insurance. Appendix A lists the actual case limit cutoff computations for each site and displays thresholds associated with various percentages of the budget paid as re-insurance. Appendix C displays each catchment area's Privacy Act protected catastrophic cases which satisfied the 5% cutoff criteria during FY 1995. Table 2 and Appendices B and D reflect similar computations when using a three year rather than a one year historical basis for deriving the case limit estimate amounts.

Executive Summary

This report presents the estimation of case total limits for catastrophic re-insurance payments to be made to thirty-four Army TRICARE catchment areas for Fiscal Year (FY) 1996. The HQ Medical Command (HQ MEDCOM) program of catastrophic re-insurance began in FY 1992 for the initial thirteen Gateway sites only. The Tri-Service CHAMPUS Statistical Database (TCSD) Composite Institutional Record V2.0 database, which includes both institutional and professional services CHAMPUS payments, is used to derive case totals. Appendices A and C are based on utilizing one year of FY 1995 past historical data to obtain catastrophic cutoff estimates. These appendices reflect the final HQ MEDCOM catastrophic case thresholds and the data are summarized in Table 1 as part of this report Summary (p. 4). These cutoffs, when implemented by HQ MEDCOM, will result in approximately 5% of each catchment area's total annual CHAMPUS budget being paid through catastrophic re-insurance. Appendix A (pp. A-1-34) lists the actual case limit computation for each catchment area and displays cutoffs associated with various percentages of the budget paid as re-insurance. Appendix C (pp. C-1-50) displays each catchment area's Privacy Act protected catastrophic cases that satisfied the 5% cutoff criteria during FY 1995. Appendices B and D (pp. B-1-38, D-1-88) and Table 2 (p. 5 of this Summary) reflect similar computations when employing three years of past historical data (FY 1993-FY 1995) rather than FY 1995 as the only year of past history on which to base the computations for catastrophic case cutoff limits. The thresholds utilizing one year of prior history (as listed in Table 1, Appendices A and C) were chosen by HQ MEDCOM as the final case cutoff limits for application to the Army catchment areas during FY 1996.

Appendix A (pp. A-1-34) lists the actual case limit computation for each Army TRICARE site and displays the cutoffs associated with various percentages of the budget paid as catastrophic re-insurance. For each catchment area, catastrophic cutoff amounts for hospitalization cases discharged in FY 1995 were compared to the actual grand total of government payments processed for all CHAMPUS care provided in that catchment area during FY 1995. These discharged patient cases were extracted with claims paid through 31 December 1995 to obtain a more complete grand total based on the FY 1995 date of care. From this comparison, case cutoff limits were derived for each catchment area. The appendix only shows each catchment area's threshold percentages that are in the range near the 5% level. Table 1 in this Summary (p. 4) summarizes each catchment area's computed catastrophic case cutoff amount at 5%, the total CHAMPUS costs in FY 1995, and the resulting catastrophic payment total at the 5% level. For example, as shown in Table 1, using Fort Hood's FY 1995 total CHAMPUS cost amount of \$25,050,742, once a patient hospitalization case reaches \$52,000, HQ MEDCOM would assume liability for all payments above that cutoff amount. Based on the hospital discharges occurring in FY 1995, the \$52,000 cutoff would have resulted in \$1,264,319 paid to Fort Hood through catastrophic re-insurance, assuming all care was actually paid in FY 1995.

Although Appendices B and D are presented in this report to allow comparison of the calculated results when using one year versus three years of past historical data, little can be inferred from matching these two sets of outcomes because of the non-linearity of the mathematical relationships in the case limit estimate methodology. Computing catastrophic cutoff amounts for each catchment area is dependent upon several factors besides the amount of a site's total annual CHAMPUS budget and the percentage of budget used for the cutoff. A primary part of the calculation is the catchment area's actual CHAMPUS patient caseload whose individual costs are literally inserted into the mathematical computations as the various cutoff amounts are derived. Preference for using one year versus three years of past history as the basis for obtaining case limit thresholds can be decided only by using heuristic selection rules to choose the type of results desired from the data calculations. Examples of such general selection rules used by HQ MEDCOM are described below.

Base realignment/closures and the subsequent downsizing of MEDDACs to clinics has added volatility at some MEDCOM installations over the past few years, resulting in data that are in transition. Although a three year baseline of historical data is often a discerning methodology for the computation of estimates such as catastrophic case limits, when data is fluxuating, a one year period as a baseline more closely follows the current data conditions and trends. For instance, Table 2 (p. 5) references cutoffs founded upon FY 1993-FY 1995 CHAMPUS history for each catchment area. In this table, based on three years of past data, case limits were computed for four catchment areas (Fort Benjamin Harrison MEDDAC, Fort Devens MEDDAC, Letterman ACHC, and Fort Ord MEDDAC) that have been closed for over one year. On the other hand, Table 1 (p. 4) which was calculated using the most current one year of CHAMPUS data as a baseline indicates no cutoffs for these four catchment areas. This is an extreme example of how utilizing a three year baseline during volatile times may not truly reflect the current situation.

However, the primary reason for HQ MEDCOM's selection of a one year historical data baseline for its FY 1996 catastrophic cutoffs was that the most current twelve months of past CHAMPUS data reflect contemporary management policies and prevailing programs-in-place at each individual catchment area. With this method, current data are weighed instead of any data prior to a one year period of time. It was desired by HQ MEDCOM that all new programs implemented at the catchment areas be taken into account in the FY 1996 cutoff case limit computations, thus allowing the cutoffs to reflect as much as possible what is presently ongoing at the catchment areas.

Final case limit amounts to be utilized range from a low of \$21,000 at Redstone Arsenal MEDDAC to a high of \$154,000 at Fort Drum MEDDAC (p. 4, Table 1). At Redstone Arsenal, thirty FY 1995 hospitalization cases (see pp. C-37-38), each with CHAMPUS costs over the \$21,000 case cutoff limit, had cost excesses that summed to \$458,730, or approximately 5% of Redstone Arsenal's nearly \$9.2M total annual FY 1995 CHAMPUS budget. On the other hand, Fort Drum MEDDAC, with its

high cutoff of \$154,000, had only one FY 1995 institutional patient case (p. C-16) whose total excess costs after the \$154,000 cutoff amounted to \$449,375, or 5% of Drum's \$8.9M total FY 1995 annual CHAMPUS costs.

Appendix C displays for each catchment area, the Privacy Act protected catastrophic patient cases which satisfied the cutoff criteria during the FY 1995 year. It should be noted that the methodology used hospital discharges which occurred in FY 1995 when computing catastrophic case threshold limits. Examination of Appendix C will demonstrate, for at least some of the longer hospital lengths of stay, that not all of the hospitalization may have been paid, or even occurred during FY 1995. For purposes of cutoff computation, the total cost of each case was arbitrarily assumed to have been paid in the same fiscal year as the discharge, i.e., FY 1995. This assumption was employed to use a prevalence-based estimate to project catastrophic cases which would be expected to arise throughout a given budget year. In any year there will be hospitalizations which surpass the catastrophic limit which were admitted during the previous year, or discharged and partially paid during the following year, as well as hospitalizations which are admitted, discharged and paid for within the same year. As reported in the Executive Summaries of the Health Services Command Publications Fiscal Year 1993 CHAMPUS Catastrophic Case Limits, Gateway Catchment Areas, RP 93-009, DTIC: AD A262 324, February 1993, Fiscal Year 1994 CHAMPUS Catastrophic Case Limits, Gateway Catchment Areas, RP 94-011, DTIC: AD A276 488, February 1994, and Fiscal Year 1995 CHAMPUS Catastrophic Case Limits, Gateway Catchment Areas, RP 95-005, DTIC: AD A296 967, March 1995, it has been determined through testing with several TRICARE catchment areas' data that the above methodology provides a very accurate estimate of future catastrophic re-insurance payments.

Technical Note. The following TCSDP data were utilized for report:

- A) Composite Institutional Record (CIR) V2.0
- B) Composite Professional Record (CPR) V1.0
- C) Main Relational Libraries V1.1
- D) TCSDP Indexing Logic Module #C5B1A96.
